

Joel Nyongesa - Personal Resume Website

Student: Joel Nyongesa

Project title: Data Science Resume Website using HTML, CSS, JavaScript, and Bootstrap

Summary of Customization

I customized a BootstrapMade resume/CV template direction into a complete data science portfolio for Joel Nyongesa. The site now uses Joel's portrait, updated contact details, education, professional experience, technical stack, awards, and selected data science projects from the CV.

Creative Changes Made

1. Built a stronger hero section around Joel's data science identity and portrait.
2. Added an impact ledger showing forecasting, optimization, and research-to-dashboard value.
3. Reorganized skills into model lab, data systems, research operations, and BI delivery.
4. Rewrote project cards to show each project's question, method, and output.
5. Added responsive navigation, project filtering, CV download, and email copy interaction.

Technology Used

HTML5, CSS3, JavaScript, Bootstrap 5, Bootstrap Icons, AOS, and GitHub Pages.
